
Installation

1. Open the installer page (`infrakit-fotodoku-installer-en.html`) in your browser.
2. Drag the orange button **“Create photo report”** into the bookmarks bar.
 - ♦ If dragging doesn't work: copy the text from the fallback box and paste it as the URL of a new bookmark.

Usage

1. Log in to InfraKit and click the bookmark – the window opens.
2. **Step 1:** choose project and folder, **“Load photos from folder”**, tick the photos. Filter options as in InfraKit. For more folders just switch – your selection is kept.
3. Click **“Continue to layout”**.
4. **Step 2:** choose grid, details below the photo and sort order, optionally a logo and map page.
5. **“Download PDF”** – or pick a target folder and **“Save PDF to InfraKit”**.

Tips

- ♦ Show the bookmarks bar: `Ctrl+Shift+B` (Mac: `Cmd+Shift+B`).
- ♦ Drag the header to move the window, drag the bottom-left corner to resize. ⇆ docks left/right, – minimizes.
- ♦ With many photos, loading the properties takes a moment – the filters appear once everything is loaded.
